

Shades Mountain Baptist Church

Projects: New Construction & Upgrade

Shades Mountain Baptist Church is one of the largest Churches in the State of Alabama. With a 40 acre campus lighting costs had become a larger due to increased maintenance and energy consumption. Further, light levels were inadequate and needed to be elevated for aesthetics, security, and safety reasons. Shades Mountain turned to LED Solution to develop a custom solution.

In developing a solution for Shades Mountain there were three major goals: 1) Increase lighting levels within the parking areas, 2) Integrate lighting with existing control systems 3) Minimize Energy and Maintenance Costs. LED Solution's custom lighting design accomplished all of their goals, and virtually eliminated lighting related maintenance. The lighting upgrades created a much more modern look for the church, while generating significant savings in their annual operating budget.

"We knew the benefits a campus-wide LED conversion would provide us so it was an easy decision. Better security, ambiance, low/no-maintenance, parts and labor savings vs traditional lighting, we've recognized them all.

Every dollar we save is another dollar we can allocate towards direct ministry which has been especially impactful in a year like 2020!"
